

Mohammad Panahpoury

Back-End Developer

Backend developer focused on designing and building scalable, maintainable systems. Experienced with Go and PHP/Laravel, familiar with modern architectures such as DDD and Hexagonal, inter-service communication with gRPC, and working in containerized environments using Docker and Kubernetes. Passionate about continuous learning, problem-solving, and developing software following industry best practices.

Education

2022 - Now

Bachelor of Mechanical Engineering

Shahid Rajaee University

Expertise

- Golang
- Sql/NoSql
- Unit Test
- Docker/Kuber
- PHP/Laravel
- JS/Html/CSS

Language

English

Persian

Experience

2025 - Now

Bootcamp trainee at Quera

Golang Back-End Developer

- Completed an advanced, industry-grade Golang bootcamp focused on building scalable backend systems.
- Gained hands-on experience with Go concurrency and parallelism (goroutines, channels, synchronization patterns).
- Designed and implemented systems using modern architectural approaches, including Domain-Driven Design (DDD) and Hexagonal Architecture.
- Built microservices-based architectures with gRPC for high-performance inter-service communication.
- Worked with containerization using Docker and service-oriented deployment practices.
- Implemented data persistence using both SQL databases (PostgreSQL) and NoSQL solutions (Redis).
- Developed network-level components with a solid understanding of TCP/IP fundamentals.
- Practiced Test-Driven Development (TDD) and implemented comprehensive unit tests and end-to-end (E2E) tests to ensure code correctness, reliability, and long-term maintainability of Golang services.

2024 - 2026

Pouyagaran Holding

PHP/Laravel Back-End Developer

- Designed and developed clean, well-documented RESTful APIs using Laravel, following best practices for scalability, security, and maintainability.
- Applied advanced Laravel features (service container, queues, jobs, events, policies) to build robust business-critical systems.
- Designed and optimized relational database schemas, focusing on data integrity, performance, and long-term maintainability.
- Collaborated closely with product and business teams to translate accounting and CRM domain requirements into reliable backend solutions.

2022 - 2024

Cedar Holding

PHP/Laravel Back-End Developer

- Developed and maintained scalable backend services for an e-commerce website, admin dashboard, and mobile application APIs.
- Built clean, well-structured RESTful APIs to support web and mobile clients efficiently.
- Implemented role-based access control and business logic for admin dashboards and e-commerce workflows.
- Optimized database design and queries for performance and reliability, ensuring smooth user experience under high load.
